

## Lawful Notice of Liability and Acceptance

To School Nurses and School Administrators Regarding the Masking of Children:

1. Upon request, all Schools are required to disclose any and all potential conflicts of interest (COI) including private contracts with manufacturers and/or local, state, or federal government agencies. Has your school, your school administrators, or employees of the school system received any funds from the federal or state governments, any private corporations, foundations, or individuals which is in any way tied to promoting the use of masks? Can you please provide a list of any and all possible financial conflicts of interest your school system may have promoting masks for children?
2. There is a great deal of research assessing masks ability to reduce exposure to viruses. Most professional articles confirm there is little-to-no viability for cloth masks, paper masks, or even N95 masks to stop the ingress or egress of viral particles due to their extremely small size, making masks virtually useless to prevent viral spread. N95 surgical masks are, when properly fitted to the individual, generally successful in reducing up to 95% of the spread of *bacteria* in clinical settings, but virus particles are dramatically smaller than invisible bacteria and such viruses are unable to be filtered through cloth masks, paper masks, or N95 masks. Based on this data, can you supply me with rational medical reasons why masks are required, other than that your administration has a "policy" based upon an arbitrary governmental standard?
3. Masks have been repeatedly shown to restrict airflow, thereby reducing one's ability to breathe freely without recycling the expressed air of exhalations. This reduced airflow has been shown to significantly reduce oxygenation to the wearer. Studies have shown that the wearing of a sealed mask increases CO<sub>2</sub> to levels considered unacceptable to EPA and OSHA Workplace Standards within 60-90 seconds. Rebreathing CO<sub>2</sub> and reducing influx of inhaled fresh air directly contribute to the lowered oxygenation of children's blood and brains. This moderate reduction of oxygen is deleterious to children's health and well being, and impairs their ability to think clearly and fully develop their brain/nervous system during their growth phases. Recognizing these well-accepted facts: Who is liable if my child is injured or shows signs of oxygen restriction and/or cognitive decline because of the harmful effects of mask wearing required by your School?
4. Based on the fact that school-age children have a "near zero" chance of dying from Covid-19, and similarly have extremely remote chances of serious illness when exposed to Covid-19, and child-to-teacher transmission of Covid-19 has never once been documented to have occurred in any school system, what reason is there to potentially induce harm to children if the benefits of mask-wearing are extremely low to nil?
5. Is mask wearing justified when covering people's faces reduces one's ability to see facial expressions and learn to read the emotional content of conversations? Are not these social and

psycho-emotional skills valuable and important for young people to learn, yet are hindered by the wearing of face-covering masks?

6. Can you inform me of the potential "benefit vs risk of injury" of mask-wearing in the age demographic of the children under your care? Is there any risk of temporary or permanent injury that could possibly result in impairment of function or disability if my child is forced to continually wear a mask for 6-7 hours during a normal school day?

7. Since any and all Medical procedures legally require 'Informed Consent' and explicit acceptance of associated risks, can you furnish me with the written document you supply to the recipients of your mask policy that clearly explains the risk and benefits? Based on the above, who should I contact regarding my legal withholding of Informed Consent for my child/children who could be potentially harmed by your policy?

Please note the above is a Lawful Notice of Liability and Acceptance.

Having read the above, you have been informed of your responsibility and liability for any harm induced to said children under your care. Please answer the above questions and respond to me via the contact information below. Thank you.
